

## There is NO Difference Between Manufactured (Virgin/New) & Reclaimed Refrigerants

Due to the EPA's TESTING REQUIREMENTS

EPA approved Reclaimers are required to provide lab data, upon request validating that the reclaimed refrigerant meets the ARI-70 standard

### Reclaimed refrigerants:

The EPA requires reclaimed refrigerants to meet the same ARI-700 purity standards required by manufacturers of refrigerants

Symbiotic strategies between HVAC contractors and EPA reclaimers will safeguard our environment and ensure a ready supply of R-22 Refrigerant in the future.

### **RECLAIMED & RECYLCED REFRIGERANTS ARE NOT THE SAME:**

Many HVAC contractors confuse recycled refrigerant with reclaimed refrigerant, however, they are quite different.

Recycled refrigerants are not required to be processed to remove any impurities from the refrigerant (freon). Reclaimed refrigerants, go thru a chemical process that removes impurities from the refrigerant and are then NRTL Verified.
